# MOCKUP

There are many things that can be improved in our calculator. The biggest change is that user can change modes between basic mode and scientific mode. Another change will be that you can install our calculator not just on Ubuntu but also on Windows and MacOS.
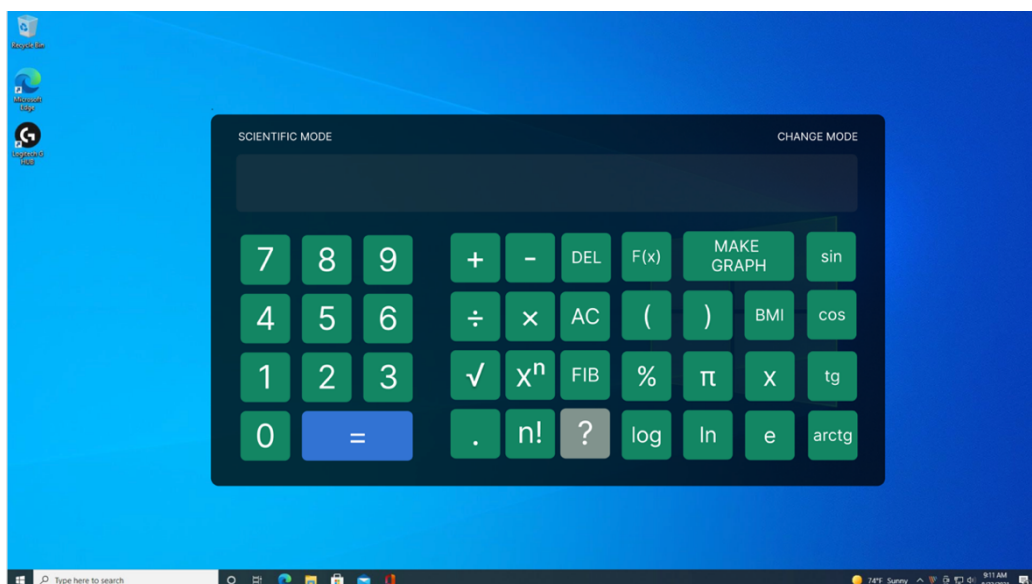

Basic mode will look like this:

On the picture above we can see these changes:
- Support of another operating system
- Button for changing mode

If we will click on CHANGE MODE the mode will be changed to scientific mode and it will look like this:

We can see these changes:

- User can enter function by clicking on F(x) button
- Calculator can show graph of function by clicking on MAKE GRAPH button
- Added sinus, cosines, tangents, arctangents
- User can calculate BMI by clicking on BMI button
- User can calculate percentage
- Added (,), π, e buttons
- User can enter logarithm or natural logarithm
- User can use variable x to solve equation

If user will insert some function and will click MAKE GRAPH. It will look like this:
